

Case Study

Real-Time Accurate Measurements for Custody Transfer

Objectives

To provide Husky Energy with a reliable measurement for tank filling/custody transfer metering application. By upgrading to Dynamic Flow Computer Model Micro MVL, both the supplier and customer were able to have a trusted & reliable measurement.

Solution

Husky Energy installed Micro MVL meters at Lima Refinery locations on their custody transfer lines. The meters were installed to provide accurate measurement between supplier and customer, to meet the criterion of accuracy & quality assurance.

Value to Client

- The Micro MVL Flow Computers provided the client with real-time, continuous and accurate Liquid measurements.
- The flow measurement provides the supplier and customer with the confidence of accuracy and minimizes loss.
